Canyon V21 stem and Profile Design 1/Seventeen Stem HSF Faceplate Incompatibility Warning

⚠ WARNING It has come to our attention that consumers may be purchasing Profile Design's [HSF Faceplate](#) (UPC code: 00723660009052; part number: AC117HFPKT) to fit to the Canyon V21 stem (stem body pictured).

This is not an authorised or safe use of the HSF Faceplate

While the bolt spacing is similar between the HSF Faceplate and the V21 stem body, the clamp coverage (surface area covered around the handlebar curve) is not the same as the Canyon V21 faceplate and this configuration has not been subjected to safety testing. ***Use of the HSF faceplate in this configuration could result in a premature failure of the handlebar, stem, faceplate or bolts and a loss of control.***

The V21 stem is original equipment on the 2021 model year onwards [Canyon Speedmax CF Disc](#) (all models) and was also supplied on all models of the previous generation (2016 to 2020) Canyon Speedmax CF (rim brake).

Issued: June 2021
